Always use non-chlorinated water, maintain pH levels between 5.5-7.2 and check reservoir after adding all nutrients. Oxygenate water before and during application. To prevent nutrient settling, always use a pump at the bottom of the reservoir to continually agitate and mix the nutrient water during application.

Research and development conducted using water obtained by reverse osmosis containing near 0 PPM.

The Oneness Program works excellent in all growing applications: ebb & flow (re-circulating), drain to waste, aeroponics, deep water culture and fogponic systems, using any growing media or garden setup. If using a ebb & flow system, drain your reservoir every 5-7 days then clean your equipment, pumps, and remove any filmy buildup on the reservoir itself.
